How to secure you password.

1. Use a unique password for each of your account and keep them on a safe place.
2. Use a long password made up of numbers, letters and symbols.
Try using a phrase that only you know like
One idea is to think of a phrase that only you know like “My friends John and Jasmine send me a funny email once a day” and then use numbers and letters to recreate it. “MfJ&Jsmafe1ad;” is a password with lots of variations. Then repeat this process for other sites.
3. Set up your password recovery options and keep them up-to-date.
Sometimes you forget your password or get locked out, you need a way to get back into your account. You can also add a secondary email or a phone number to your profile to receive a code to reset your password via text message.
